

Mock Test — Light: Mirrors and Lenses

A mixed paper covering the whole chapter. Total: 20 marks. Section A is interactive.

Objective (1 mark each)

Q1 • MCQ**[1]**

A mirror curving outward is —

- (a) concave (b) convex (c) plane (d) flat

Q2 • MCQ**[1]**

A convex mirror always gives an image that is —

- (a) erect and diminished (b) inverted and large (c) same size (d) inverted and small

Q3 • MCQ**[1]**

The law of reflection states that —

- (a) $i = r$ (b) $i = 2r$ (c) $i > r$ (d) $i < r$

Q4 • MCQ**[1]**

A concave mirror makes parallel rays —

- (a) diverge (b) converge (c) vanish (d) stay parallel

Q5 • MCQ**[1]**

A magnifying glass is a —

- (a) concave lens (b) convex lens (c) convex mirror (d) plane mirror

Q6 • TRUE / FALSE**[1]**

We see images through a lens but in a mirror.

- (a) True (b) False

Q7 · FILL IN THE BLANK

[1]

A convex lens is thicker in the _____ than at the edges.

Q8 · FILL IN THE BLANK

[1]

Vehicle side-view mirrors are _____ mirrors.

Short answer (2 marks each)

Q9

[2]

State the two laws of reflection.

Q10

[2]

Give one use each of a concave mirror and a convex mirror, with reason.

Q11

[2]

Differentiate between a convex and a concave lens.

Long / application (3 marks each)

Q12

[3]

Explain why convex mirrors are used as side-view mirrors and concave mirrors in torches.

Q13

[3]

A concave mirror focuses sunlight to burn paper, while a convex lens magnifies print. Explain both using converging behaviour.
