

Practice — Population, Community and Interactions

Section A is interactive — tap an option or type and press Check. Sections B and C are written practice.

Objective (1 mark each)

Q1 · MCQ**[1]**

A group of the same kind of organism in a habitat is a —

- (a) community (b) population (c) habitat (d) species pool

Q2 · MCQ**[1]**

All the different populations sharing a habitat form a —

- (a) population (b) community (c) family (d) herd

Q3 · MCQ**[1]**

"A frog eats insects" is an example of a —

- (a) biotic–abiotic interaction (b) biotic–biotic interaction (c) abiotic–abiotic interaction
(d) no interaction

Q4 · MCQ**[1]**

Moving pollen from stamens to carpels is called —

- (a) germination (b) pollination (c) respiration (d) digestion

Q5 · ASSERTION–REASON**[1]**

A: Insects help plants produce seeds.

R: Insects pollinate flowers by carrying pollen between them.

- (a) Both true, R explains A (b) Both true, R does not explain A (c) A true, R false
(d) A false, R true

Q6 · FILL IN THE BLANK

[1]

"Fish take oxygen from water" is a biotic—_____ interaction.

Q7 · FILL IN THE BLANK

[1]

All populations living together in a habitat make up a _____.

Short answer (2 marks each)

Q8

[2]

Differentiate between a population and a community.

Q9

[2]

Give one example each of a biotic-biotic and a biotic-abiotic interaction.

Q10

[2]

What is pollination and why is it important?

Long / application (3 marks each)

Q11

[3]

Researchers found that a pond WITH fish had more flowering plants nearby than a pond without fish. Explain this chain of interactions.

Q12

[3]

Why can't a healthy habitat have only one type of organism? Explain with the idea of resources and interactions.
