

Practice — Interdependence and Conservation

Section A is interactive — tap an option or type and press Check. Sections B and C are written practice.

Objective (1 mark each)

Q1 • MCQ

[1]

The dependence of living and non-living things on one another is called —

- (a) competition (b) interdependence (c) pollination (d) isolation

Q2 • MCQ

[1]

Elephants enter farms mainly because of —

- (a) curiosity (b) loss of forest habitat (food/water scarcity) (c) too many forests
(d) cold weather

Q3 • MCQ

[1]

A passage that connects forest patches for safe animal movement is a —

- (a) highway (b) wildlife corridor (c) canal (d) fence

Q4 • MCQ

[1]

Overfishing a pond is likely to —

- (a) have no effect (b) disturb the balance of many other organisms (c) increase fish only
(d) add oxygen

Q5 • TRUE / FALSE

[1]

Cutting forests for roads can force wild animals into human areas.

- (a) True (b) False

Q6 · FILL IN THE BLANK

[1]

Marked paths connecting forests for safe animal movement are wildlife _____.

Q7 · FILL IN THE BLANK

[1]

Living things depend on each other and on _____ things for survival.

Short answer (2 marks each)

Q8

[2]

What is interdependence in nature? Give one example.

Q9

[2]

Why are elephants increasingly entering human settlements?

Q10

[2]

What is a wildlife corridor and how does it help?

Long / application (3 marks each)

Q11

[3]

Explain how human activities can disturb the balance of a habitat, using one example, and suggest one way to reduce the harm.

Q12

[3]

Describe the chain by which removing trees from a forest can ultimately affect both animals and humans.
