

Practice — Immunity, Vaccines and Treatment

Section A is interactive — tap an option or type and press Check. Sections B and C are written practice.

Objective (1 mark each)

Q1 • MCQ**[1]**

Antibiotics are effective against —

- (a) viruses (b) bacteria (c) all germs (d) deficiency diseases

Q2 • MCQ**[1]**

Vaccines are —

- (a) curative (b) preventive (c) only for adults (d) a type of antibiotic

Q3 • MCQ**[1]**

The first vaccine (against smallpox) was developed by —

- (a) Alexander Fleming (b) Edward Jenner (c) Louis Pasteur (d) Robert Hooke

Q4 • MCQ**[1]**

Penicillin, the first antibiotic, was discovered by —

- (a) Edward Jenner (b) Alexander Fleming (c) Kamal Ranadive (d) M. K. Bhan

Q5 • ASSERTION-REASON**[1]**

A: Antibiotics should be taken only as prescribed.

R: Misusing antibiotics leads to antibiotic resistance.

- (a) Both true, R explains A (b) Both true, R does not explain A (c) A true, R false
(d) A false, R true

Q6 · FILL IN THE BLANK

[1]

The body's natural ability to fight disease is called _____.

Q7 · FILL IN THE BLANK

[1]

Jenner used material from _____ (a milder disease) to protect against smallpox.

Short answer (2 marks each)

Q8

[2]

What is a vaccine and how does it protect us?

Q9

[2]

Why do antibiotics not work against the common cold?

Q10

[2]

What is antibiotic resistance and how can it be reduced?

Long / application (3 marks each)

Q11

[3]

Saniya says "Antibiotics can cure any infection, so we don't need to worry about diseases." Give three reasons why she is wrong.

Q12

[3]

Explain how Edward Jenner developed the smallpox vaccine, using the steps observation → hypothesis → experiment → result.
