

Answer Key — Health: The Ultimate Treasure

Final answers with brief reasons.

Objective

- Q1** (b) **mental** — physical, mental and social well-being.
-
- Q2** (b) **Diabetes** — diabetes is lifestyle-linked and does not spread.
-
- Q3** (c) **protozoan** — a protozoan, spread by mosquitoes.
-
- Q4** (b) **viruses** — antibiotics don't work on viruses.
-
- Q5** (b) **Jenner** — Jenner, against smallpox using cowpox.
-
- Q6** (b) **False** — that is a sign; a symptom is what the patient feels.
-
- Q7** **vectors** — carrier insects are vectors.
-
- Q8** **antibiotic** — penicillin was the first antibiotic.
-

Short answer

- Q9** Symptom = felt by the patient (pain); Sign = seen/measured (fever).
-
- Q10** Communicable are caused by pathogens and spread (e.g. typhoid); non-communicable are lifestyle/deficiency-linked and don't spread (e.g. diabetes).
-
- Q11** They train the immune system before infection to stop disease; they cannot treat someone already ill.
-

Long / application

- Q12** Air (cough/sneeze) → mask/cover mouth; water/food → drink boiled water, eat cooked food; vectors (mosquitoes) → nets/repellents; contact (shared items) → don't share personal items (any three with a matching measure).
-
- Q13** It is when bacteria survive and multiply despite an antibiotic. It develops from misuse — taking antibiotics when not needed or not finishing the course, letting resistant bacteria spread. Prevent it by using antibiotics only as prescribed, in the right dose and full duration, and avoiding unnecessary use.
